About the job

About GenTube

GenTube is a consumer AI creation app.

We’re a small team in Toronto backed by top consumer investors and operators.

We believe creation should feel like entertainment.

Our goal: turn 1B+ doom scrollers into creators.

If you want to build a real product for millions of people, this is your shot. The companies dominating consumer AI today won’t be the ones defining it tomorrow.

Why Join

- Build something huge
- Ship fast and learn fast
- Work on real product, not meetings
- Care about users and numbers
- Own big parts of the app

Founders previously built products used by 100M+ users and sold an AI startup for $150M.

If you want stability, slow iteration, and narrow scope this is not the job.

If you want maximum impact and speed, keep reading.

Role: Full Stack Product Engineer

You will ship a lot. You will own things end-to-end. You will see your work impact real users immediately.

What You’ll Do

- Build. Ship constantly. Learn from** users. Iterate.
- Own frontend + backend + infra
- Build ultra-low-latency systems for real-time image creation
- Put image models into production (hosting, routing, monitoring)
- Build MLOps (rollouts, fallbacks, quality checks, cost + speed tuning)
- Kill what doesn’t work. Double down on what does.
- Tech Stack
- TypeScript / Node.js / React
- Convex, CDN, S3, large-scale image pipelines
- Hyper-fast diffusion models and low-latency LLMs

What We Want

- You ship, then improve
- You move fast without needing permission
- You care about outcomes, not just clean code
- You do well with tight time and few resources
- You take ownership by default

Details

- Top market salary + equity
- Health, dental, vision
- Unlimited PTO

Ready to build for a billion people? Let's talk.
